Environmental Phenomena

* The unit may malfunction if subjected to radio-frequency interference. It SHOULD revert to normal operation when the interference stops. If not, it may become necessary to turn the power off and back on, or remove and reinstall the batteries.

* In the unlikely event of an electrostatic discharge, the unit may malfunction and lose memory, requiring the user to reset the device by removing and reinstalling the batteries.

Hinge Pull outward to open.

Tote Box

Designed for storage of Laser Pegs® parts.

Battery Compartment Cover

Remove the three Phillips head screws with a 4mm screw driver.

DO NOT SUBMERGE IN WATER

WARNING! Each Laser Peg® draws current from the batteries. Therefore, the more pegs you use, the quicker you will deplete your battery power! As the power weakens, the current will slowly fall and some Laser Pegs® will illuminate (typically the reds and yellows) and some won't. When the Laser Pegs® dim the Laser Pegs® are not broken, they just need stronger batteries or an AC Adapter. You have 3 simple options...

1. Use a 5-volt AC Adapter--available from www.LaserPegs.com
2. Change the batteries.
3. Use high quality batteries. They will last a little longer, but they will still deplete rapidly the more laser pegs you connect!

PHAROS LIGHTHOUSE OF ALEXANDRIA: One of the Seven Wonders of the Ancient World, this skyscraping spire stood for nearly 1,500 years on the island of Pharos off the coast of one of ancient Egypt's capitals, Alexandria. According to some sources, the top of its tower soared more than 120 meters (394 feet) above the ocean—taller than the Statue of Liberty—and could be seen from more than 100 miles away.
